PERFORMANCE-TESTED

Bull Sale

Selling 120

Angus & Brangus Bulls and Yearling Angus Bulls

Selling 100

Commercial Bred Heifers

View videos at:
www.TannerFarms.net

This sale will be broadcast live on the internet.
DVAuction
Broadcasting Real-Time Auctions
Real time bidding & proxy bidding available.

Dear Friends,

We want to invite you and your family to join us **Saturday, November 2, 2024** at Noon for our annual **Tanner Farms Bull and Bred Heifer Sale**. This is one of the best groups of bulls we've ever raised. We have 120, 2-year old and Coming 2-year old Angus and Brangus bulls. Our bulls are soundness tested, Trich-tested, guaranteed fertile, and part of our certified herd. We're also offering 100 excellent Spring-Calving Bred Heifers to choose from as well. All heifers will be veterinary checked safe in calf prior to the sale.

We are happy to offer personalized service to our customers and can help you select a bull to meet your specific needs. Whether you're looking for a calving-ease bull or one for a mature cow herd we should have a bull to fit your criteria. Just come by the farm or give us a call.

Videos of bulls and heifers will be on our website at www.tannerfarms.net. **We offer free delivery with the purchase of three or more bulls and a 5% Discount on the purchase of 10 or more bulls.** Bulls will be penned for viewing by 3:00 on Friday, November 1, however we'd be happy to assist you if you're in the area or wanted to come by prior to sale day.

Our entire family invites you to join us for good food, fellowship, and warm Southern Hospitality. Food will be available all day and lunch will be served beginning at 10:30.

Hope to see you there!

Gary & Lorie Tanner

**PROVEN GENETICS
THAT IMPACT
TODAY'S FARMING
FUTURE**

About the Bulls:

- Raised on Forage Based, High Fiber Ration
- Large Group of Calving Ease Bulls
- Bulls Have Passed a Breeding Soundness Exam
- Functional, Adaptable Pasture Ready Bulls
- 100% Satisfaction Guaranteed, Easy Handling
- Accustomed to Heat & Humidity of our Environment
- Bred for Strong Maternal Characteristics
- Sired by Top Breed Leading Sires

Tanner Farms Pasture PERFORMANCE-TESTED Bull Sale

Coming 2 Year Old Angus & Brangus Bulls
 Saturday, November 4, 2023 • 12 Noon • Tanner Farms, Shuqualak, Mississippi

SALE DAY PHONES:

Gary Tanner | Cell 601.319.6610
 Walter Riddell | 662.242.1555
 Harvey Koehne | 601.319.6640
 Brice Allsup | 662.574.7461
 Office | 601.477.2202

This sale will be broadcast live on the internet.
DVAuction
 Broadcasting Real-Time Auctions
 Real time bidding & proxy bidding available.

AUCTIONEER:

Lakin Oakley | 903.277.9610

CATALOG PRODUCED BY:

Cattle Solutions | 979.820.8362

TERMS AND CONDITIONS:

Cattle will sell under the suggested Terms and Conditions of the American Angus Association (http://www.angus.org/Pub/suggested_sale_terms.pdf). All bulls are guaranteed fertile through the first breeding season. All cattle must be paid for prior to loading unless prior arrangements have been made with Tanner Farms.

SALE LOCATION AND DIRECTIONS:

Directions to Farm from Meridian:

Driving north on Interstate 59, exit right at Exit 157B - Macon and Hwy. 45 North. Continue on 45 North for 31 miles until you reach the 4-way stop at Scooba. Continue through the 4-way stop and in 9 miles turn right onto Field Road. Tanner Farms Sale Barn is located 1 mile on the left.

Directions to Farm from Columbus:

Take US 82 E to US 45 S toward Macon. Drive south on US 45 S for approxi-mately 30 miles until you reach the 4-way stop at Ma con. Continue through the 4-way stop on 45 South for 12 miles. You will see signs for the town of Shuqualak. Continue on US 45 South for 1 / 4 mile. Turn left and cross over. Tanner Farms Sale Barn is located 1 mile on the left on Field Road.

GPS Address:

Tanner Farms, 743 Field Road, Shuqualak, MS 39361

ACCOMMODATIONS:

Western Motel-Scooba

Located 10 minutes south of Farm 18051 Hwy. 45
 Scooba, MS 39358 | 662.476.5700

Hampton Inn

Located 45 minutes south of Farm 103 US Hwy. 11 and 80
 Meridian, MS 39302 | 601.483.3000

Drury Inn and Suites

Located 45 minutes south of Farm 1121 Hwy. 11 and 80
 Meridian, MS 39301 | 601.483.5570

Wyngate by Wyndham

Located 45 minutes north of Farm 120 Brickerton Street
 Columbus, MS 39701 | 662.327.9999

Brice, Linda and Samuel Allsup

Ann Burks

Janie and Harvey Koehne

Walter Riddell

- All bulls are trich tested.
- All bulls will have individual EID tags.
- Every bull has been sire verified by DNA.
- All bulls are freeze branded with their own permanent ID - Brangus on the left hip and Angus on their left side.
- All Bulls have passed a breeding soundness exam performed by Dr. Anna Anderson, DVM.
- All Bulls 18-24 months have been evaluated by ultrasound measurement.

SUPPLEMENTAL INFORMATION:

A supplemental sheet will be available sale day with complete and up-to-date information. Announcements from the auction block take precedence over sale book information.

HERD HEALTH:

All Cattle will be accompanied by proper health certificates for immediate shipment.

TRUCKING:

Greg Brown | 601.941.6913 | Free Delivery with Purchase of Three or More Bulls!

LIVESTOCK MORTALITY INSURANCE:

To properly insure your investment, Mike Dobbins with American Livestock Insurance, will be available to assist you with mortality insurance. 601.606.4712

FOOD AND REFRESHMENTS:

Food will be available all day. Lunch will be served beginning at 10:30 a.m.

VIDEOS OF BULLS SELLING:

Videos of the bulls selling can be previewed at: www.tannerfarms.net or on www.dvauctions.com

5% discount on purchases of 10 Bulls or More! FREE DELIVERY on purchase of 3 or More Bulls!

Purchasing and restoring a farm dating back to 1845, we began to expand our registered Angus program. Much work had to be done to bring this once thriving farm back to life. For almost thirty years, the farm and plantation home had lain fallow and unoccupied. Fields were reclaimed, fences and ponds built and repaired, and grasses and corn were planted where long ago cotton had once been king. The lush green hills today bear witness to God's redemptive hand on this land just as He works in the lives of people. The Lord blessed us in this undertaking: may He be honored and glorified in all we do!

Psalm 103:1-13

Tanner Farms

HOW TO READ THE REPORT

Each bull listed in this report is comparable to every other bull in the database. The analysis takes into account only the differences expressed in each herd in which the bulls were used. For example, bull A has a weaning EPD of +30 lb. and bull B has a weaning EPD of +20 lb. If you randomly mate these bulls in your herd, you could expect bull A's calves to weigh, on average, 10 lb. more at weaning than bull B's progeny (30 - 20 = 10).

NAME	TATTOO	REGISTRATION BIRTH DATE	PRODUCTION								MATERNAL

EXPECTED PROGENY DIFFERENCE (EPD), Expected Progeny Difference (EPD), is the prediction of how future progeny of each animal are expected to perform relative to the progeny of other animals listed in the database. EPDs are expressed in units of measure for the trait, plus or minus. Interim EPDs may appear on young animals when their performance has yet to be incorporated into the American Angus Association National Cattle Evaluation (NCE) procedures. This EPD will be preceded by an "I", and may or may not include the animal's own performance record for a particular trait, depending on its availability, appropriate contemporary grouping, or data edits needed for NCE.

EPDs are enhanced by genomic results generated by:  

\$VALUE INDEX (\$VALUE), an economic selection index allows multiple change in several different traits at once pertaining to a specific breeding objective. The \$Value is an estimate of how future progeny of each sire are expected to perform, on average, compared to progeny of other sires if the sires were randomly mated to cows and if calves were exposed to the same environment.

ACCURACY (ACC), is the reliability that can be placed on the EPD. An accuracy of close to 1.0 indicates higher reliability. Accuracy is impacted by the number of progeny and ancestral records included in the analysis.

PRODUCTION EPDs

CALVING EASE DIRECT (CED), is expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf heifers. It predicts the average difference in ease with which a sire's calves will be born when he is bred to first-calf heifers.

BIRTH WEIGHT EPD (BW), expressed in pounds, is a predictor of a sire's ability to transmit birth weight to his progeny compared to that of other sires.

WEANING WEIGHT EPD (WW), expressed in pounds, is a predictor of a sire's ability to transmit weaning growth to his progeny compared to that of other sires.

YEARLING WEIGHT EPD (YW), expressed in pounds, is a predictor of a sire's ability to transmit yearling growth to his progeny compared to that of other sires.

RESIDUAL AVERAGE DAILY GAIN (RADG), expressed in pounds per day, is a predictor of a sire's genetic ability for postweaning gain in future progeny compared

to that of other sires, given a constant amount of feed consumed.

DRY MATTER INTAKE (DMI), expressed in pounds per day, is a predictor of difference transmitting ability for feed intake during the postweaning phase, compared to that of other sires.

YEARLING HEIGHT EPD (YH), is a predictor of a sire's ability to transmit yearling height, expressed in inches, compared to that of other sires.

SCROTAL CIRCUMFERENCE EPD (SC), expressed in centimeters, is a predictor of the difference in transmitting ability for scrotal size compared to that of other sires.

MATERNAL EPDs

HEIFER PREGNANCY (HP), is a selection tool to increase the probability or chance of a sire's daughters becoming pregnant as first-calf heifers during a normal breeding season. A higher EPD is the more favorable direction and the EPD is reported in percentage units.

CALVING EASE MATERNAL (CEM), is expressed as a difference in percentage of unassisted births with a higher value indicating greater calving ease in first-calf daughters. It predicts the average ease with which a sire's daughters will calve as first-calf heifers when compared to daughters of other sires.

MATERNAL Milk EPD (Milk), is a predictor of a sire's genetic merit for milk and mothering ability as expressed in his daughters compared to daughters of other sires. In other words, it is that part of a calf's weaning weight attributed to milk and mothering ability.

HERDS (MkH), indicate the number of herds from which daughters are reported.

DAUGHTERS (MKD), reflects the number of daughters that have progeny weaning weight records included in the analysis.

MATURE WEIGHT EPD (MW), expressed in pounds, is a predictor of the difference in mature weight of daughters of a sire compared to the daughters of other sires.

MATURE HEIGHT EPD (MH), expressed in inches, is a predictor of the difference in mature height of a sire's daughters compared to daughters of other sires.

COW ENERGY VALUE (\$EN), expressed in dollar savings per cow per year, assesses differences in cow energy requirements as an expected dollar savings difference in daughters of sires. A larger value is more favorable when comparing two animals (more dollars saved on feed energy expenses). Components for computing the cow \$EN savings difference include lactation energy requirements and energy costs associated with differences in mature cow size.

MANAGEMENT EPDs

DOCILITY (Doc), is expressed as a difference in yearling cattle temperament, with a higher value indicating more favorable docility. It predicts the average difference of progeny from a sire in comparison with another sire's calves. In herds where temperament problems are not an issue, this expected difference would not be realized.

CLAW SET EPD (Claw), is expressed in units of claw-set score, with a lower EPD being more favorable indicating a sire will produce progeny with more ideal claw set. The ideal claw set is toes that are symmetrical, even and appropriately spaced.

FOOT ANGLE EPD (Angle), is expressed in units of foot-angle score, with a lower EPD being more favorable indicating a sire will produce progeny with more ideal foot angle. The ideal is a 45-degree angle at the pastern joint with appropriate toe length and heel depth.

PULMONARY ARTERIAL PRESSURE EPD (PAP), is expressed in millimeters of Mercury (mmHg), with a lower EPD being more favorable indicating a sire should produce progeny with a lower PAP score. PAP score is an indicator of susceptibility to high altitude disease commonly experienced at elevations greater than 5,500 feet. Selection for this trait aims to improve the genetic potential for a sire's progeny to have lower PAP scores thus a lower chance of contracting high altitude disease increasing the environmental adaptability of cattle living in mountain areas.

HAIR SHED EPD, is expressed in units of hair shed score, with a lower EPD being more favorable indicating a sire should produce progeny who shed their winter coat earlier in the spring. Selection for this trait should improve the genetic potential for a sire's progeny to shed off earlier increasing the environmental adaptability of cattle living in heat stressed areas and producers grazing endophyte-infected (hot) fescue.

CARCASS EPDs

CARCASS WEIGHT EPD (CW), expressed in pounds is a predictor of the differences in hot carcass weight of a sire's progeny compared to progeny of other sires.

MARBLING EPD (Marb), expressed as a fraction of the difference in USDA marbling score of a sire's progeny compared to progeny of other sires.

RIBEYE AREA EPD (RE), expressed in square inches, is a predictor of the difference in ribeye area of a sire's progeny compared to progeny of other sires.

FAT THICKNESS EPD (Fat), expressed in inches, is a predictor of the differences in external fat thickness at the 12th rib (as measured between the 12th and 13th ribs) of a sire's progeny compared to progeny of other sires.

GROUP/PROGENY (C GrP/Pg and U GrP/Pg), reflects the number of contemporary groups and the number of carcass and ultrasound progeny included in the analysis.

ANGUS-ON-DAIRY \$VALUE INDEXES

ANGUS-ON-DAIRY \$VALUE INDEXES, are bioeconomic selection indexes that allow multiple change in several different traits at once pertaining to a dairy-beef crossbreeding objective. These values are terminal crossbreeding indexes to estimate of how future beef-on-dairy progeny of each Angus sire are expected to perform, on average, compared to beef-on-dairy progeny of other Angus sires if the sires were randomly mated and beef-on-dairy calves were exposed to the same environment.

These indexes were designed as specific crossbreeding tools for Angus bulls being mated to dairy cows. Two indexes have been developed for the dairy market:

ANGUS-ON-HOLSTEIN (\$AxH), a terminal index, expressed in dollars per head, to predict profitability differences in progeny due to genetic traits weighted by appropriated economics of each Angus sire when mated to Holstein females. The underlying breeding objective assumes Angus bulls will be mated to Holstein females to produce Angus-dairy crossbred calves to be fed and marketed on a quality-based grid. Traits included are as follows: calving ease, growth from birth through the feeding phase, feed intake, dressing percent, yield grade, quality grade, muscling, and height.

ANGUS-ON-JERSEY (\$AxJ), a terminal index, expressed in dollars per head, to predict profitability differences in progeny due to genetic traits weight by appropriated economics of each Angus sire when mated to Jersey females. The underlying breeding objective assumes Angus bulls will be mated to Jersey females to produce Angus-dairy crossbred calves to be fed and marketed on a quality-based grid. Traits included are as follows: calving ease, growth from birth through the feeding phase, feed intake, dressing percent, yield grade, quality grade, and muscling.

\$VALUE INDEXES

\$Value indexes, an economic selection index allows multiple change in several different traits at once pertaining to a specific breeding objective. The \$Value is an estimate of how future progeny of each sire are expected to perform, on average, compared to progeny of other sires if the sires were randomly mated to cows and if calves were exposed to the same environment.

MATERNAL WEANED CALF VALUE (\$M), an index, expressed in dollars per head, predicts profitability differences from conception to weaning with the underlying breeding objective assuming that individuals retain their own replacement females within herd and sell the rest of the cull female and all male progeny as feeder calves. The model assumes commercial producers will replace 25% of their breeding females in the first generation and 20% of their breeding females in each subsequent generation. Traits included are as follows: calving ease direct, calving ease maternal, weaning weight, milk, heifer pregnancy, docility, mature cow weight, claw set and foot angle.

WEANED CALF VALUE (\$W), an index, expressed in dollars per head, to predict profitability differences in progeny due to genetics from birth to weaning. The underlying objective being producers will retain 20% of the female progeny as replacements and sell the rest of the cull females and their male counterparts as feeder calves. Traits included are as follows (in no particular order): birth weight, weaning weight, milk, and mature cow weight.

FEEDLOT VALUE (\$F), an index, expressed in dollars per head, to predict profitability differences in progeny due to genetics for postweaning feedlot merit compared to the progeny of other sires. The underlying objective assumes producers will retain ownership of cattle through the feedlot phase and sell fed cattle on a carcass weight basis, but with no consideration of premiums or discounts for quality and yield grade. Traits contributing directly to the index are as follows: yearling weight (gain), carcass weight and dry-matter intake.

BEEF VALUE (\$B), a terminal index, expressed in dollars per carcass, to predict profitability differences in progeny due to genetics for postweaning and carcass traits. This terminal index assumes commercial producers wean all male and female progeny, retain ownership of these animals through the feedlot phase and market these animals on a carcass grid. Traits included in the index are as follows: yearling weight, dry-matter intake, marbling, carcass weight, ribeye area and fat.

COMBINED VALUE (\$C), an index, expressed in dollars per head, which includes all traits that make up both Maternal Weaned Calf Value (\$M) and Beef Value (\$B) with the objective that commercial producers will replace 20% of their breeding females per year with replacement heifers retained within their own herd. The remaining cull heifer and steer progeny are then assumed to be sent to the feedlot where the producers retain ownership of those cattle and sell them on a quality-based carcass merit grid. Expected progeny differences (EPDs) directly influencing a combined index: calving ease direct (CED) and maternal (CEM), weaning weight (WW), yearling weight (YW), maternal milk (Milk), heifer pregnancy (HP), docility (DOC), mature cow weight (MW), foot angle (Angle), claw set (Claw), dry matter intake (DMI), marbling (Marb), carcass weight (CW), ribeye area (RE) and fat thickness (Fat).
